

Name: Wahid Ali

Section: C

Semester: 6th

Subject: Artificial Intelligence

AI Agent Assignment: Job Eligibility Checker

Visual Representation

Textation

- **Sensor:**
Collects the applicant's data such as age, educational qualification, years of experience, and required skills/certifications.
- **Processing:** Evaluates the collected data against predefined if-else rules, checking age, qualification, experience, and skills to internally decide "Eligible" or "Not Eligible."
- **Actuator:** Executes the result by outputting "Eligible for the Job" if all conditions are met, or "Not Eligible for the Job" if any condition fails.

PEAS Framework:

P → Accurate Eligibility Decisions

E → Applicant Details Data

A → Eligible / Not Eligible Result

S → Applicant Input Form

Environment Type

Property	Justification
Observability	Fully

Deterministic	The same input always produces the same output, with no randomness involved.
Determinism	Each eligibility check is independent of previous checks.
Episodes	Episodic
Discrete	Static
Agents	Single
Values	Discrete
